Toolbox 	A minor triads Rock and roll!							

Practice tips for partners: Movement makes learning concrete for the young. Movement offers opportunity to sense balance in motion. Playing a musical instrument requires balance while some parts of the body are in motion. Do not underestimate the value of movement activities in class. They are fun. But, they are also purposeful and support physical as well as cognitive and social developments. Piano performance requires balance to properly shift and distribute weight from the upper body to the hand effectively.
